**WASH Indicators**

<table>
<thead>
<tr>
<th>Number of women, men, boys and girls benefitting from safe/improved drinking water, meeting demand for domestic purposes, at minimum/agreed standards</th>
<th>Safe water: fecal coliform count of 0 organisms per 100 ml of water</th>
<th># of functional improved water sources (Handpump) in the site operating at the end of the reporting period</th>
<th>Corresponding 4W sub indicator</th>
<th>Parameter/Assumptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improved source of water: type of water source that, by nature of its construction or through active intervention, is likely to be protected from outside contamination, in particular from contamination with fecal matter. Domestic purposes: bathing, drinking and cooking</td>
<td>Improved water sources: tapstand/hand dug well in the site operating at the end of the reporting period</td>
<td># of functional improved water sources (Handpump) in the site operating at the end of the reporting period</td>
<td>Improved water sources: tapstand/hand dug well in the site operating at the end of the reporting period</td>
<td># of people who received safe drinking water through household water filters or centralized water treatment system during water scarcity to total population in the site period.</td>
</tr>
</tbody>
</table>

| Number of targeted women, men, boys and girls benefitting from a functional excreta disposal system, reducing safety/public health/environmental risks | Functioning excreta disposal system: system which leads to safe disposal of excreta, so that it does not contaminate the environment, water, food or hands, is essential for ensuring a healthy environment and for protecting personal health. | # of functional adult latrines that meet design requirements in the site operating during reporting period | Improved water sources: tapstand/hand dug well 400 PPL, Hand Pump 500 PPL, Tank, Water Boating/Trucking, Distribution System (max: 15L/P/D, min 5-7.5L/P/D : 8 hr tapstand open, |

| Number of targeted women, men, boys and girls benefitting from timely and/or adequate and/or tailored personal hygiene items and receiving appropriate community tailored messages that enable health seeking behavior | # of people (men) receiving consultation, hygiene promotion messages and sessions during reporting period | # of people (men) receiving consultation, hygiene promotion messages and sessions during reporting period | Camp: 20 people : 1 latrine |

**Source of information**

- The information of acute watery diarrhea and influenza like illness are received from Rakhine Early Warning, Alert and Response System (EWARS). Note that real-time EWARS monitoring is practiced, and that necessary actions are independent of this analysis.
- Formula for proportional morbidity: Numerator is the number of acute watery diarrhea cases (OR) number of influenza like illness (new cases only) divided by the denominator of total number of consultations in the same area during the specified time period.

#### WASH & Health Integrated Analysis by IDPs Site

- % of people benefiting from safe/improved drinking water, meeting demand for domestic purposes, at minimum/agreed standards
- % of people benefiting from a functional excreta disposal system, reducing safety/public health/environmental risks
- % of People benefiting from timely/adequate/tailored personal hygiene items and receiving appropriate/community tailored messages that enable health seeking behavior
- Proportional morbidity of AWD

### Water Quality Testing at Water Sources & Proportional morbidity of AWD

- % Water samples tested at water sources
- % Water samples passed at water source
- Proportional morbidity of AWD

### Water Quality Testing at Household & Proportional morbidity of AWD

- % Water samples tested at Household
- % Water samples passed at HH
- Proportional morbidity of AWD

**Legend:**
- Blue bars represent % of people benefiting from safe/improved drinking water, meeting demand for domestic purposes, at minimum/agreed standards.
- Green bars represent % of people benefiting from a functional excreta disposal system, reducing safety/public health/environmental risks.
- Orange bars represent % of People benefiting from timely/adequate/tailored personal hygiene items and receiving appropriate/community tailored messages that enable health seeking behavior.
- Red bars represent Proportional morbidity of AWD.

**Notes:**
- **Numerator:** Number of people reached by Water/Sanitation and Hygiene
- **Denominator:** Total population in IDP site
RAKHINE STATE - IDP sites (2021 - Qtr 4 - HEALTH & WASH Integrated Analysis, October - December 2021)

Propotional People reached with Hygiene Promotion & Proportional morbidity of AWD

% of Functioning Latrine & Proportional morbidity of AWD

% of people safe to use latrines (at day/night) & Proportional morbidity of AWD

% of Functioning Latrine & Proportional morbidity of AWD

Propotional People reached with Hygiene Promotion & Proportional morbidity of AWD

Source of information:
The information of acute watery diarrhea and influenza like illness are received from Rakhine Early Warning, Alert and Response System (EWARS). Note that real-time EWARS monitoring is practiced, and that necessary actions are independent of this analysis.

Formula for proportional morbidity: Numerator is the number of acute watery diarrhea cases (OR number of influenza like illness (new cases only) divided by the denominator of total number of consultations in the same area

Numerator*: Number of Men/Women/Children who safe to use latrines
Denominator*: Total number of Men/Women/Children reached with hygiene promotion

29% of total population reached with hygiene promotion

*Numerator*: Number of Men/Women/Boys/Girls reached with hygiene promotion
*Denominator*: Total number of population reached with hygiene promotion
