Read detail instruction on the README page on the Github

The screenshot shows a QGIS Desktop window with a web browser open to the QGIS manual page for 'Combine style databases'. The browser address bar shows the URL: [https://seepuuyar.github.io/QGIS328-Manual-MM/docs/user\\_manual/processing\\_algs/qgis/cartography.html#qgiscom...](https://seepuuyar.github.io/QGIS328-Manual-MM/docs/user_manual/processing_algs/qgis/cartography.html#qgiscom...). The browser page title is '29.1.1.2. Style database များကိုပေါင်းခြင်း (Combine style databases)'. The browser page content is in Burmese and describes the algorithm for combining multiple QGIS style databases into a single style database. The QGIS Desktop window shows the 'Combine Style Databases' dialog box with the following parameters:

- Parameters | Log |
- Input databases: 0 inputs selected
- Objects to combine: ramps, Text formats, Label settings
- Output style database: [Save to temporary file]
- Advanced | Run as Batch Process...
- 0% | Cancel
- Run | Close | Help

The dialog box also contains the following text: 'Combine style databases. This algorithm combines multiple QGIS style databases into a single style database. If any symbols exist with duplicate names between the different source databases these will be renamed to have unique names in the output combined database.'
