Introduction

In April 2014, the Government of the Republic of the Union of Myanmar conducted its latest census, after three decades without a Population and Housing Census. In the post-independence period, comprehensive population and housing censuses were only successfully undertaken in 1973, 1983 and most recently in April 2014.

Censuses are an important source of benchmark information on the characteristics of the population and households in every country. One unique feature of a census is its ability to provide information down to the lowest administrative level. Such information is vital for planning and evidence based decision-making at every level. Additional data uses include allocation of national resources; the review of administrative boundaries; the positioning of social infrastructures, drawing national development plans, service provision and developing social infrastructure, and for humanitarian preparedness and response.

The results of the 2014 Census have been published so far in a number of volumes. The first was the Provisional Results released in August 2014. The Census Main Results were launched in May 2015. These included The Union Report, Highlights of the Main Results, and reports of each of the 15 States and Regions. The reports on Occupation and Industry and Religion were launched in March 2016 and July 2016, respectively. All the publications are available online at http://www.dop.gov.mm/ and http://www.dop.gov.mm/ and http://www.dop.gov.mm/ and http://www.dop.gov.mm/ and http://

The current set of the 2014 Census publications comprise township and sub-township reports. Their preparation involved collaborative efforts of the Department of Population and UNFPA. This report contains selected demographic and socio-economic characteristics of Mawlamyinegyun Township in Ayeyawady Region. The information included in this report is the situation of 2014 March 29, Census night. Township level information is very important. However, the level of confidence of township estimates is not the same as Union level information. Some of the townships have relatively small populations; the interpretation of these estimates should be made with caution. Some of the indicators, such as IMR/ U5MR, were adopted only after careful analysis considering a number of factors to ensure consistency in the results. Estimates for townships with relatively small number of observations should not be taken as exact estimates of the mortality level, but rather they should be regarded as reasonable indicators for the scale of mortality risk they experience, an indication of which townships are better off and which are in a more vulnerable situation.

Census information on Mawlamyinegyun Township

Total population	311,340 *				
Males	153,127				
Females	158,213	158,213			
Sex ratio	97 males per 10	00 females			
Percentage of urban population	10.6%				
Area (Km²)	1,257.2 **				
Population density (persons per Km ²)	247.7 persons				
Number of wards	13				
Number of village tracts	108				
	Total	Urban	Rural		
Population in conventional households	307,596 31,960 275,6				
Number of conventional households	74,886 7,583 67,303				
Mean household size	4.1 persons ***				

• In Mawlamyinegyun Township, there are slightly more females than males with 97 males per 100 females.

• The majority of the people in the Township live in rural areas with only (10.6%) living in urban areas.

• The population density of Mawlamyinegyun Township is 248 persons per square kilometre.

• There are 4.1 persons living in each household in Mawlamyinegyun Township. This is slightly lower than the Union average 4.4 persons.

Note: * Includes both household population and institution population.

** Settlement and Land Record Department, Ministry of Agriculture, Livestock and Irrigation, (2014-2015).

*** Calculated based on conventional household population.

- The proportion of productive working population between 15 to 64 years of age in Mawlamyinegyun Township is 64.3 per cent.
- The proportion of children aged 14 and below together with the proportion of the elderly aged 65 and over are less than the proportion of the working age group population.
- Fewer proportions of children and elderly reduce the dependency of those age groups on the working age population.

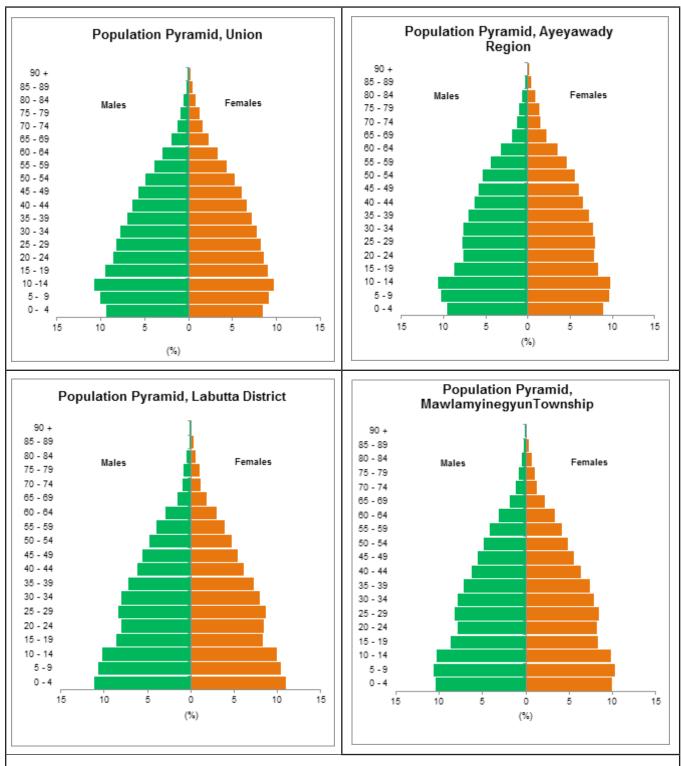

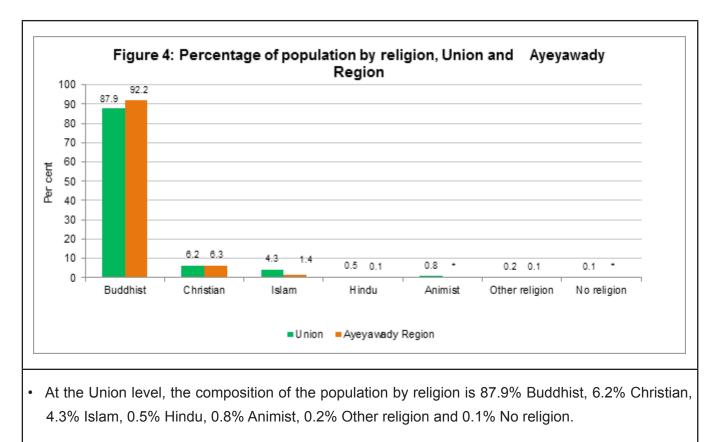

Figure 3: Population pyramid (Union, Ayeyawady Region, Labutta District and Mawlamyinegyun Township)

- The population is highest in age group 5-9. It has declined from age group 15-19 onwards.
- Compared to Union level, there is a smaller percentage of working age group 15-64 population in Mawlamyinegyun Township.
- Starting from age group 30-34, there are less males than females in all age groups.s

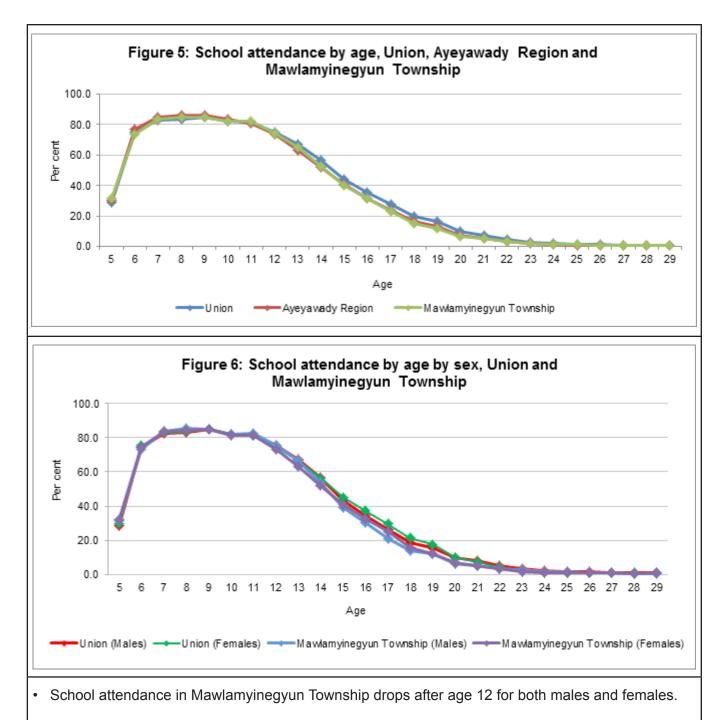

• In Ayeyawady Region, it is 92.2% Buddhist, 6.3% Christian, 1.4% Islam, 0.1% Hindu, 0.1% Other religion and less than 0.1% each for Animist and those with No religion.

Note: * Less than 0.1 per cent.

Table 11: (Continued)

• Fourteen in every 100 persons in Mawlamyinegyun Township have, at least, one form of disability.

• Slightly more females than males have disability.

• The prevalence of disability increases with age and it increases considerably after the age of 40.

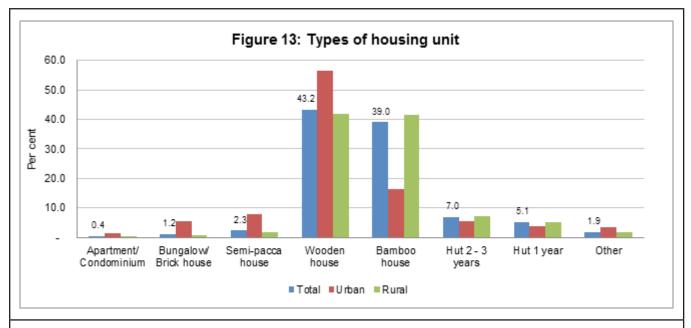

• Difficulties with seeing and walking were the most commonly mentioned forms of disability in the Township.

(G) Housing Conditions and Household Amenities

Type of housing unit

Residence	Total	Apartment/ Condominium	Bungalow/ Brick house	Semi-pacca house	Wooden house	Bamboo house	Hut 2 - 3 years	Hut 1 year	Other
Total	74,886	0.4	1.2	2.3	43.2	39.0	7.0	5.1	1.9
Urban	7,583	1.3	5.5	7.8	56.4	16.4	5.6	3.8	3.3
Rural	67,303	0.3	0.7	1.6	41.8	41.5	7.1	5.3	1.7

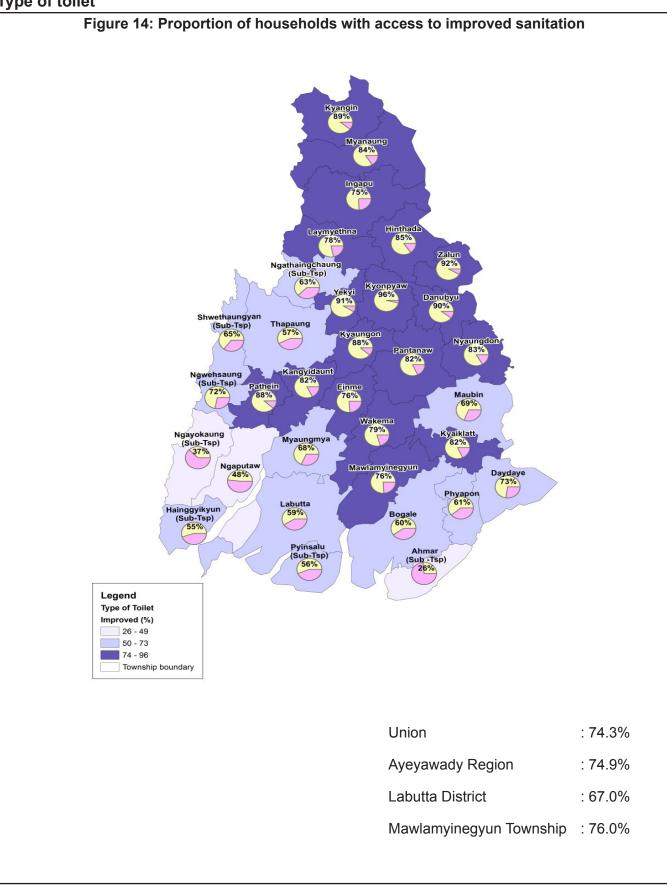

Table 12: Conventional households by type of housing unit by urban/rural

• The majority of the households in Mawlamyinegyun Township are living in wooden houses (43.2%) followed by households in bamboo houses (39.0%).

• Some 56.4 per cent of urban households and 41.8 per cent of rural households live in wooden houses.

Type of toilet

le 13: Conver	ntional house	iolas by ty	pe of tollet	by urban/i	
Туре о	of toilet	Total	Urban	Rural	
Flush		0.3	0.9	0.2	
Water seal (Imp	roved pit latrine)	75.7	92.7	73.8

Pit (Traditional p	it latrine)	5.5	2.7	5.8	
Bucket (Surface	latrine)	2.0	0.3	2.2	
Other		0.7	0.4	0.8	
None		15.8	3.0	2.2 0.8 17.2	
Total	Per cent	100.0	100.0	100.0	
Total	Number	74,886	7,583	67,303	

Table 13: Conventional households by type of toilet by urban/rural

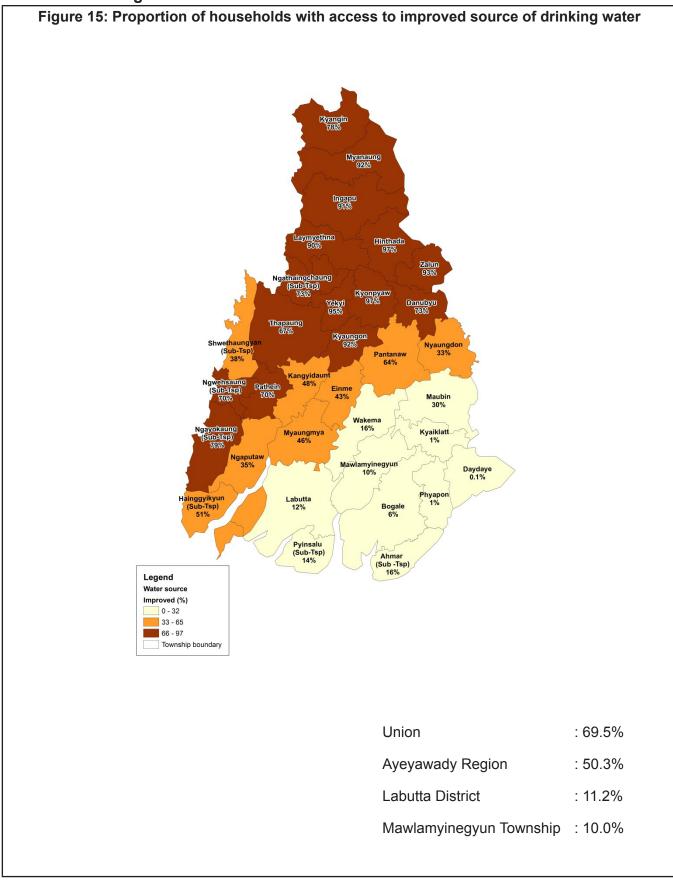

• Some 76.0 per cent of the households in Mawlamyinegyun Township have improved sanitation facilities (flush toilet (0.3%), water seal (improved pit latrine) (75.7%)).

 Compared to other townships in Ayeyawady Region, this proportion belongs to (74-96) per cent group.

• The proportion of households with improved sanitation facilities in Ayeyawady Region is 74.9 per cent while it is 74.3 per cent at the Union level.

• Some 15.8 per cent of the households in the township have no toilet facilities. For the entire Ayeyawady Region, it is 12.8 percent.

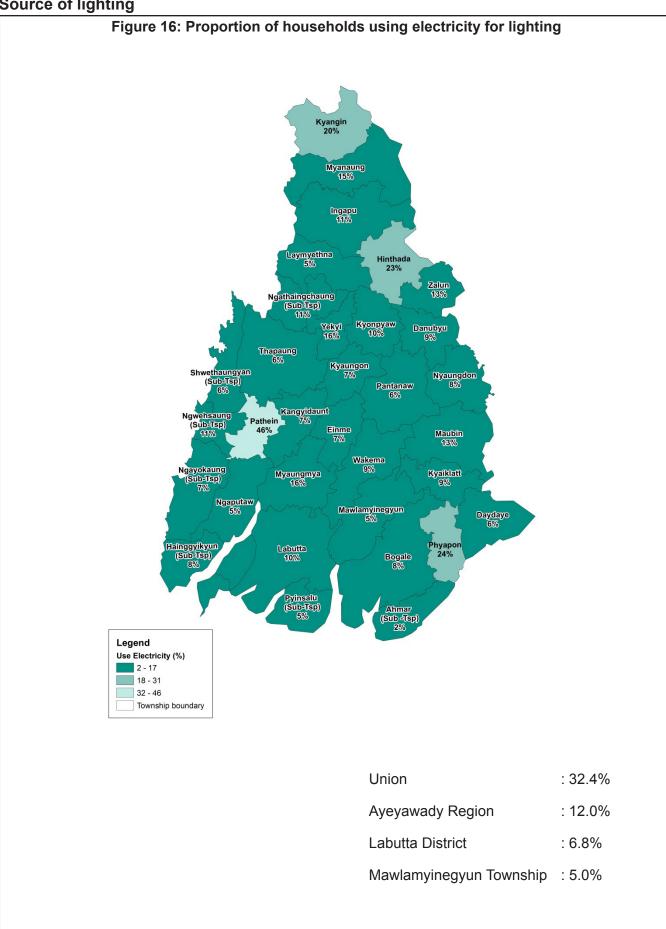

• In the rural areas of Mawlamyinegyun Township, 17.2 per cent of the households have no toilet facilities.

Source	of drinking water	Total	Urban	Rural
Tap water/ Piped		0.8	6.0	0.2
Tube well, bo	rehole	5.7	28.0	3.2
Protected we	II/ Spring	0.4	0.4	0.5

Total unimpr	Total unimproved drinking water		39.0	95.7
Totol	Per cent	100.0	100.0	100.0
Total	Number	74,886	7,583	67,303

- In Mawlamyinegyun Township, 10.0 per cent of households use improved sources of drinking water (tap water/piped, tube well, borehole, protected well/spring and bottled water/water purifier).
- Compared to other townships in Ayeyawady Region, this proportion of households use improved sources of drinking water belongs to (0-32) per cent group and it is lower than the Union average (69.5%).
- Some 53.6 per cent of the households use water from river/stream/canal and 32.6 per cent use water from pool/pond/lake.
- Ninety per cent of the households use water from unimproved sources.
- In rural areas, 95.7 per cent of the households use water from unimproved sources for drinking water.

Source of lighting

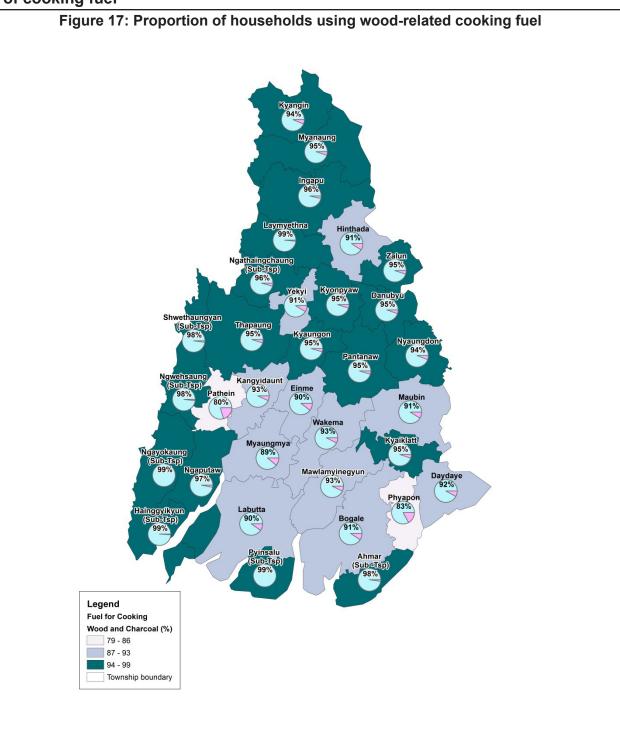

e 15: Conv	15: Conventional households by source of lighting by urban/rur								
Sou	rce of lighting	Total	Urban	Rural					
Electricity		5.0	38.9	1.2					
Kerosene		27.7	0.3	30.8					
Candle		16.0	5.4	17.2					
Battery		39.6	22.9	41.5

Total	Per cent	100.0	100.0	100.0					
iulai	Number	74,886	7,583	67,303					

• In Mawlamyinegyun Township, 5.0 per cent of the households use electricity for lighting. Compared to other townships in Ayeyawady Region, this proportion belongs to (2-17) per cent group. The percentage of households that use electricity in Ayeyawady Region is 12.0 per cent.

• The use of battery for lighting is the highest in the township with 39.6 per cent.

• In rural areas, 41.5 per cent of the households use battery for lighting.

Type of cooking fuel

Union	: 81.0%
Ayeyawady Region	: 92.7%
Labutta District	: 92.8%
Mawlamyinegyun Township	: 92.9%

16: Conv	16: Conventional households by type of cooking fuel by urban/rural								
Type of	cooking fuel	Total	Urban	Rural					
Electricity		0.3	2.8	*					
LPG		0.1	0.9	*					
Kerosene		0.2	-	0.2					
BioGas		0.1	0.7	0.1

Per cent		100.0	100.0	100.0					
Total	Number	74,886	7,583	67,303					

- In Mawlamyinegyun Township, households mainly use wood-related fuels for cooking with 89.7 per cent using firewood and 3.2 per cent using charcoal.
- Only 0.3 per cent of households use electricity for cooking.
- In rural areas, households mainly use wood-related fuels for cooking with firewood (92.4%) and charcoal (1.1%).

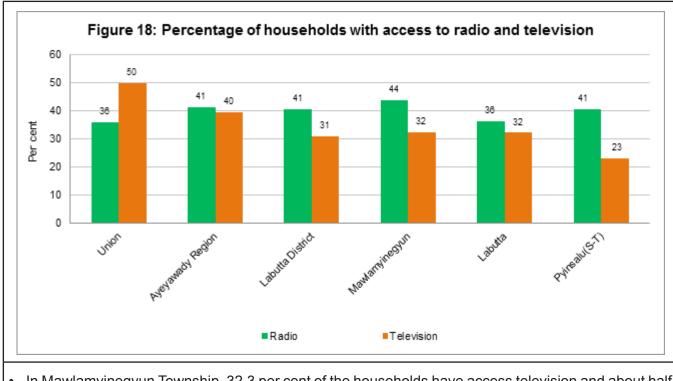

Note: * Less than 0.1 per cent.

Communication and related amenities

Table 17: Conventional households by availability of communication and related amenities by	,
urban/rural	

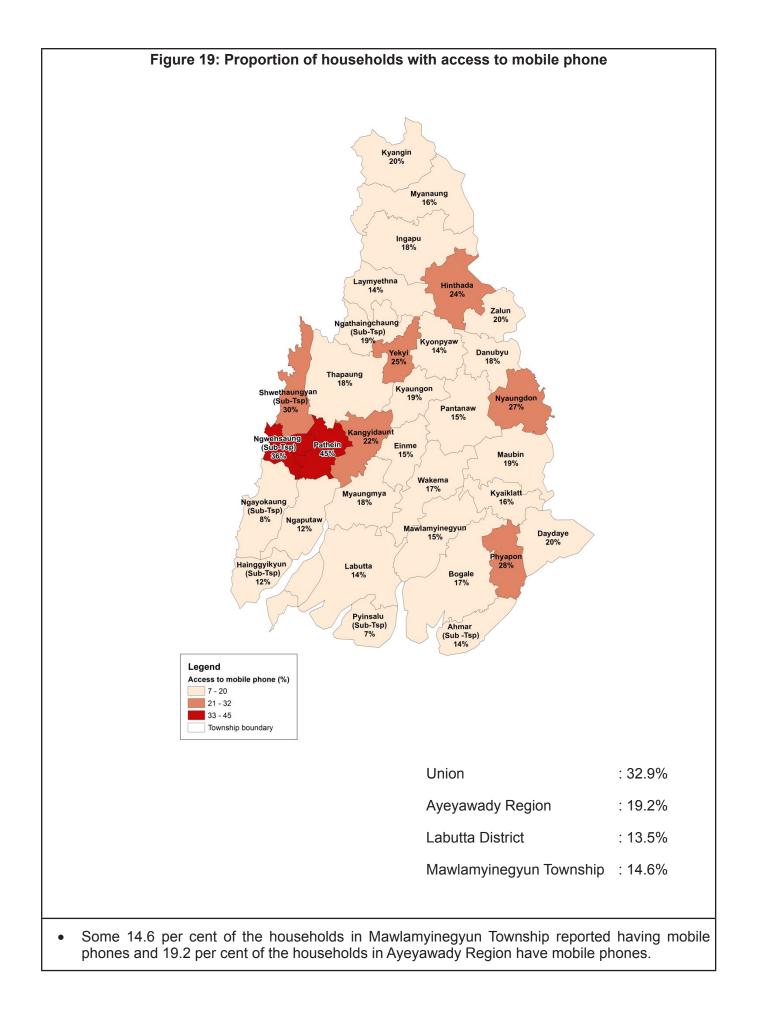

Residence	Conventional households	Radio	Television	Land line phone	Mobile phone	Computer	Internet at home	% with none of the items	% with all of the items
Total	74,886	43.8	32.3	6.1	14.6	0.9	1.2	40.4	0.1
Urban	7,583	35.0	54.0	7.1	43.3	4.3	4.8	29.0	0.6
Rural	67,303	44.8	29.9	6.0	11.4	0.5	0.8	41.7	*

 Some 43.8 per cent of the households in Mawlamyinegyun Township reported having radio and is the highest among the access of communication and related amenities. Some 54.0 per cent of households in urban areas have access to television, while the proportion for rural areas was 44.8 per cent having a radio and are the highest in urban and rural respectively.

Note: * Less than 0.1 per cent.

• In Mawlamyinegyun Township, 32.3 per cent of the households have access television and about half of the households (43.8%) reported having a radio.

Transportation items

Region/District/ Township	Conventional households	Car/Truck/ Van	Motorcycle/ Moped	Bicycle	4-Wheel tractor	Canoe/ Boat	Motor boat	Cart (bullock)

Urban	7,583	51	1,753	4,026	74	130	332	170
Rural	67,303	73	3,286	12,027	687	17,149	10,780	8,682

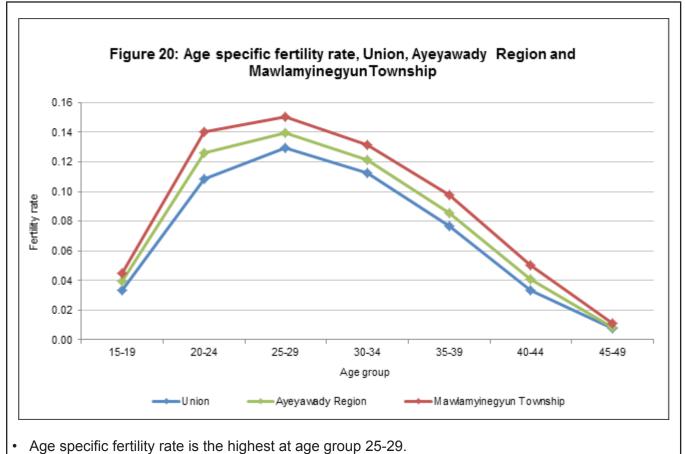

Table 18: Conventional households by availability of transportation items by urban/rural

• In Mawlamyinegyun Township, 23.1 per cent of the households have canoe/boat as a means of transport and it is the highest proportion, followed by 21.4 per cent of households having bicycle.

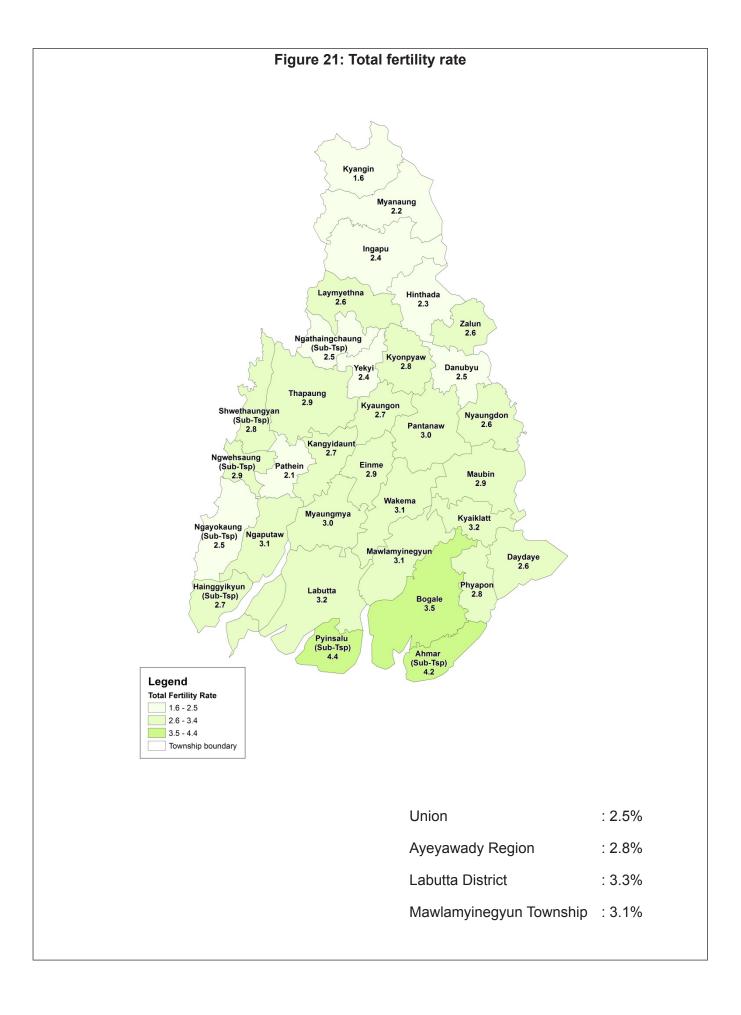

• Analysis by urban/rural residence, the majority of the households in urban areas mainly use bicycle as a means of transport while it was canoe/boat in rural areas.

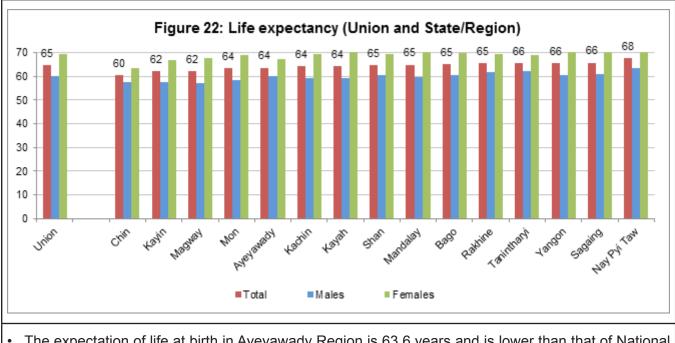

(H) Fertility and Mortality

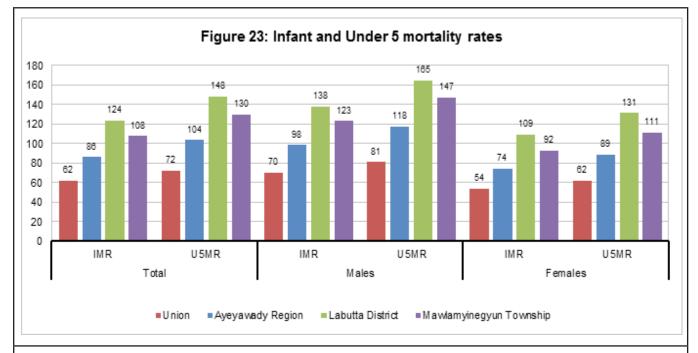

• For women aged 15-49, the total fertility rate is 3.1 children per woman and is higher than the total fertility rate of 2.5 at the National level.

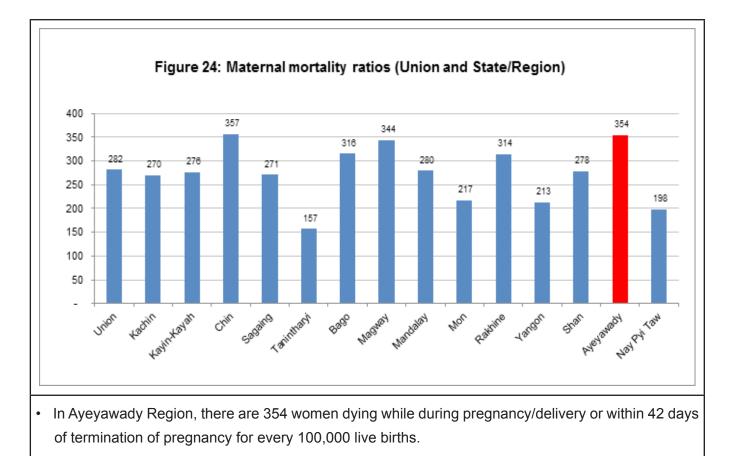

- The expectation of life at birth in Ayeyawady Region is 63.6 years and is lower than that of National level at 64.7 years.
- The female life expectancy at 67.2 years is higher than that of the males at 60.2 years.

Childhood Mortality and Maternal Mortality

- The Infant and Under 5 mortality rates in Labutta District are higher than the Union average. The Infant mortality in Labutta District is 124 deaths under age one per 1,000 live births while Under 5 mortality is 148 deaths under age 5 per 1,000 live births.
- The Infant and Under 5 mortality rates in Mawlamyinegyun Township are higher than those in Ayeyawady Region but lower than that of Labutta District. The Infant mortality in Mawlamyinegyun Township is 108 per 1,000 live births and Under 5 mortality is 130 per 1,000 live births.

- The maternal mortality ratio in Ayeyawady Region is higher than that of the Union level.
- Compared to the average maternal mortality ratio of 140 for Southeast Asian countries, the maternal mortality ratio of 282 for Myanmar is high.

Definitions and Concepts

Population: The population in this report corresponds to the de-facto population of Myanmar on Census Night (see below).

Census Night: The night between the 29th and the 30th March 2014. Every person in Myanmar was enumerated where they spent the Census Night.

Rural area: Areas classified by the Department of General Administration (GAD) as village tracts. Generally these are areas with low population density and a land use which is predominantly agricultural.

Urban area: Areas classified by the GAD as wards. Generally these areas have an increased density of building structures, population and better infrastructural development.

Population Density: The population density relates to the number of persons in a given administrative area to the surface of the area, expressed in square kilometres (Km²). Areas covered by water are excluded from the calculation.

Mean Household Size: The average number of persons per household (people living in households divided by number of conventional households).

Sex ratio: The number of males for every 100 females in a population.

Dependency ratio: The total dependency ratio is the ratio of dependents (people younger than 15 years and older than 64) to the population of working-age (age 15-64). Data are shown as the proportion of dependents per 100 working-age population. Three different measures can be calculated: total dependency ratio, child dependency ratio and old age dependency ratio.

Child Dependency Ratio: is the proportion of people younger than 15 years to the working age population (15-64).

Old Dependency Ratio: is the proportion of people older than 64 years to the working age population (15-64).

Ageing Index: The number of persons aged 65 years and over per 100 people under the age of 15 years.

Median Age: The age that divides a population into two numerically equal groups; that is, half the people are younger than this age and half are older.

Education: Education is the process by which people learn through instruction and teaching. The 2014 MPHC placed an emphasis on literacy skills, school attendance and educational attainment. The other categorisations used under education were:

- (a) Literacy: The ability to read and write in any language with reasonable understanding.
- (b) School attendance: The attendance at any regular educational institution or systematic instruction at any level of education during the last 12 months. This included schooling at pre-primary, primary, middle, high school and tertiary institutions of higher learning. The options were:
 (a) Currently attending; (b) Attended previously; (c) Never attended.

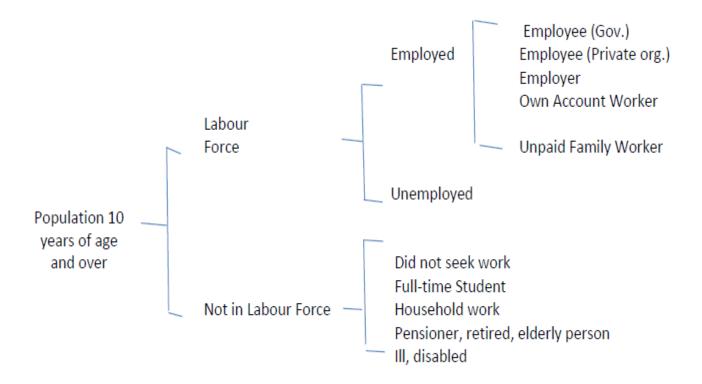

(c) Educational Attainment: The highest grade/standard/diploma/degree completed within the most advanced level attended in the education system of the country where the education was received. It covered both public and private institutions accredited by government.

Disability: Disability is a situation where a person is at a greater risk than the general population of experiencing restrictions in performing routine activities (including activities of daily living) or participating in roles (such as work) if no supportive measures are offered. The difficulties covered in the 2014 census included:

- (a) Walking difficulty (wheel chairs, crutches, limping, problems climbing steps);
- (b) Seeing difficulty (low vision, blind);
- (c) Hearing difficulty (partially or completely deaf);
- (d) **Mental/Intellectual difficulty** (slow learning development making it hard to compete with their counterparts at school, other mental conditions).

Identity card: An identity card is a document used to verify aspects of a person's personal identity. There are several types of identity cards issued by the Government of Myanmar, and national passports in the case of foreigners.

Labour Force Status: According to the type of usual economic activities during the 12 months before Census Night, all persons 10 years of age and over were classified as follows:

Labour Force: The Labour force is a general term covering "employed" and "unemployed" persons in the population.

Employed: "Employed" persons refer to those who did any work during the time of the week before the census date or worked for more than 6 months in the 12 months before the census date for pay or profit, such as a wage, salary, allowance, business profit, etc. Also included in this category were persons

working in family businesses, on a farm, in a store, in a private hospital etc., even though they were not paid any wages.

Unemployed: "Unemployed" persons refer to those who had no work but were able to work and actually seeking a job during the reference period, or at the time of the census enumeration.

Not in labour force: This category comprised persons who had no work and did not make any positive efforts to find a job during the 6 months before the census date or were unable to work. This included full time students, household work, elderly people, etc.

Employment Status: All employed persons were classified according to the economic activity status in the place where they worked during the last 12 months or if they worked in more than one place, where they worked most of the time. There were five employment categories:

- (a) **Employee (Government)**: those employed and working for government including in state organisation institutions.
- (b) Employee (Private organisation): those employed and working for private employers or private organisations. All people in private companies, NGOs, international organisations, retail and wholesale enterprises fell under this category.
- (c) **Employer:** persons who during the reference period worked in their own business, which also employed one or more other persons.
- (d) **Own account worker:** self-employed persons who worked in their own business or worked in their own/family business for family gain **and did not have any employees**.
- (e) Unpaid family worker: persons who worked in a business, farm, trade or professional enterprise operated by a member of the household/family and received no pay.

Labour force participation rate: The labour force participation rate is the ratio between the labour force and the overall size of the total population of the same age range. This is an important indicator as it portrays the proportion of the population that is economically active.

Labour force
participation rate=Labour force
(Employed + Unemployed)x100Total Population

Unemployment rate: The percentage of the total labour force that is unemployed but actively seeking employment and willing to work. These are people who are without work, looking for jobs and available for work.

Unemployed Unemployment rate = Labour force (Employed + Unemployed) **Employment to population ratio**: A statistical ratio that measures the proportion of the country's working-age population (ages 15 to 64) that is employed. The International Labour Organization (ILO) states that a person is considered employed if they have worked at least 1 hour in "gainful" employment in the most recent week.

Employment to	_	Employed	x	100
population ratio		Total Population		

Occupation: Occupation refers to the kind of work an employed person did in the establishment during the 12 months (reference period) before the census date. Put differently, occupation is the kind of work done during the last 12 months by the person employed, regardless of the industry of the establishment. In the 2014 Myanmar Census, field data collectors were instructed to collect a detailed description of the work being done such as accounts clerk, data entry operator (clerk), legal secretary, domestic worker, fisherman, human resource manager, etc. If an employed person was engaged in two or more jobs, the kind of work was decided by the work in which he/she was mainly engaged in, that is in terms of time. The occupational classification is based on the ISCO 2008.

Industry: Industry refers to the main activity of the establishment where an employed person usually worked during the 12 months (reference period) before the census date. In the 2014 Myanmar Census, industry was explained to the enumerators as the type of economic activity carried out at the person's place of work. It is defined in terms of the kind of goods produced or services supplied by the enterprise in which the person works and not necessarily the specific duties or functions of the person's job. For example, a clerical officer working in stores within a factory that makes television sets. The industry should be recorded as manufacture of electrical goods. If an employed person worked in two or more establishments, "industry" was decided by the establishment where he/she worked most. The industrial classification is based on the ISIC Revision 4.

Live Birth: A live birth is one where the infant shows one or more of the following signs of life immediately after birth: crying or similar sounds, movement of the limbs or any other parts of the body and/or any other tangible signs of life. The census was concerned only with children born alive. Also collected was information on the last live birth of ever married female respondents.

Total fertility rate (TFR): The average number of children that a woman would give birth to if all women lived to the end of their childbearing years and bore children according to the current schedule of age-specific fertility rates.

Total fertility rate (TFR) = 5 \sum Age specific fertility rate (ASFR)

Age specific fertility rate (ASFR): The age-specific fertility rate measures the annual number of births to women of a specified age or age group per 1,000 women in that age group. Unless otherwise specified, the reference period for the age-specific fertility rates is the calendar year.
